

This custom wheel rim is engineered to fit the 1985 Ford Mustang 5.0. The angular, seven-spoke design incorporates functionality with aesthetics to make an impact on the road.

Technical Details:

Specification	Detail
Car	1985 Ford Mustang 5.0
Diameter	15 in.
Width	7 in.
Backspace	5 in.
Bolt Pattern	5 x 4.5 in.
Lug Size	0.5 in.
Spoke Count	7
Material	Aluminum Alloy
Finish	Chrome

Design Description:

- **15” Diameter:** The smaller diameter reduces rotational inertia, allowing for increased acceleration ability and braking response.
- **7” Width:** The seven inch rim is ideal for handling and traction, while also providing superior water evacuation compared to wider rims.
- **5” Backspace:** Five inches of clearance maintains adequate spacing between the wheel rim and nearby vehicle components.
- **0.5” Lug Size:** Able to withstand significant shear forces during cornering and braking.
- **7-Spoke Design:** With seven spokes, the wheel rim is structurally rigid, able to resist deformation under heavy loads. This unique design also distributes forces equally, boosting safety during sharp turns and sudden braking.
- **Aluminum Alloy:** This cost-efficient material improves heat dissipation and corrosion resistance while providing a clean, visually pleasing look.
